Mohammad Aatif Shaikh

813-568-5612 | smatif.t@gmail.com | linkedin.com/in/shaikhaatif | github.com/aatif101 | Website | Tampa, FL

Education

University of South Florida — Tampa, FL
B.S. Computer Science, GPA: 3.6 | Green & Gold Scholarship — *Expected Dec. 2026*

Experience

USF Information Technology — Tampa, FL
Automation Intern — *Sep. 2026 – Present*
- Build **Microsoft Teams workflows** for AV dispatch, status updates, and handoffs, supporting **20+ concurrent users**; expanded automation first built after identifying a gap as an AV technician.

Student AV Technician — *May 2025 – Present*

Pfizer Externship | GitHub — Apr. 2026 – Oct. 2026
Extern – AI/ML, Pharmaceutical Document Intelligence — *Remote*
- Built an AI workflow that converts pharmaceutical supplier PDFs into structured, validated data, achieving **97.9% table-extraction accuracy**.
- Added field-level confidence scores and source citations; routed uncertain extractions to a human review queue.
- Built a baseline-comparison harness (F1, table accuracy, latency, cost) with **Langfuse** tracing.

Reliu App — Mar. 2026 – May 2026
Full Stack Developer
- Built a health and habit-tracking app used by its founder with React, TypeScript, and Supabase, delivering a **TestFlight-ready product in 72 hours**.

Cache AI — May 2025 – Aug. 2025
AI/ML Intern — *Remote*
- Built LLM evaluation and retrieval workflows to validate model behavior and pipeline performance before beta.
- Added AI-call latency and cost tracking and repeatable pipeline tests using **Docker** and **GitHub Actions**.

Open Source

Microsoft PyRIT (AI red-teaming toolkit) | *Python* | Merged PR #3471
- Found two zero-click data-exfiltration paths missed by PyRIT's MarkdownInjectionScorer (shortcut-reference images and raw HTML <img>); filed the issue with a reproduction script, then wrote the fix and positive/negative unit tests, reviewed and merged by maintainers.

Projects

SPOTlight – Robot Inspection Dashboard | Knight Hacks | GitHub
- Built a Spot inspection dashboard with a **four-person team**; used an **Unsloth GGUF-quantized Qwen 27B** model to explain anomalies in simulated factory missions.
- Fine-tuned **Laya (421M-parameter ModernBERT)** on AMD ROCm with PyTorch for event triage, achieving **0.805 macro-F1** on held-out missions.

EasyA – USF Course Discovery | *React, FastAPI, PostgreSQL* | GitHub | easya.fyi
- Co-built and launched a React/FastAPI course-discovery app for USF students before spring registration; **2,400+ page views** in the first month (Cloudflare), peaking at **500+** in a single day. Ranks courses by grade and withdrawal data with Bayesian smoothing, confidence labels, filters, and paginated search.

Car-Sales AI Agent | *FastAPI, Gemini (LiteLLM), SQLite* | GitHub
- Built a conversational agent over ∼100 real used-car listings with a single 5-tool loop; the model only produces tool calls, while a deterministic check re-verifies every quoted price and redacts unverifiable figures.
- Enforced guardrails and booking rules in code, not prompts; added cross-session memory and an offline test suite.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL
Web & Data: React, FastAPI, REST APIs, PostgreSQL, Supabase, SQLAlchemy, Streamlit
AI & Evaluation: PyTorch, fine-tuning, Hugging Face, RAG, Qdrant, Docling, Langfuse, LangGraph, LiteLLM, evaluation harnesses
Infrastructure & Security: Docker, GitHub Actions, AWS, Linux, AMD ROCm, llama.cpp, OWASP

Leadership

Programming & ASRC Committees | USF Student Government Senate — Aug. 2024 – May 2025
- Voted on funding allocations through ASRC, a committee overseeing **$5M+ in student government funds**.
